

## **WOMEN WITHOUT HEALTH INSURANCE**

Percent of women 18-64 years without health insurance

0 - 7.7
7.8 - 11.6
11.7 - 16.3
16.4 - 22.5
22.6 - 40.7

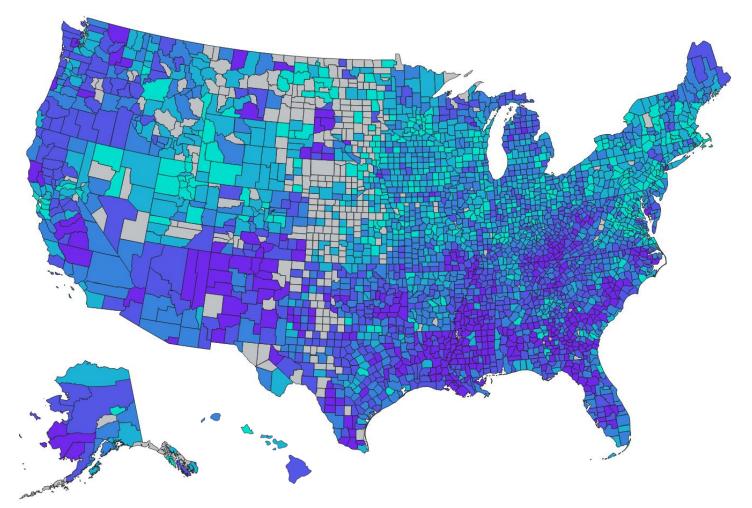

About 7 million women of childbearing age (15-44 years) across the U.S. don't have health insurance, which makes it difficult for them to get healthy before they get pregnant.

Access to well-woman care, contraceptives, substance use treatment, medication for medical conditions, and tobacco cessation becomes nearly impossible when uninsured.

The map shows the estimate of the percent of women ages 18-64 in each county who did not have insurance in 2016, about 10.4 million women. Data from the American Community Survey show that about 7 million women ages 15-44 did not have health insurance in 2016. Source: Small Area Health Insurance Estimates, 2016. American Community Survey, US Census Bureau. Prepared by March of Dimes Perinatal Data Center, 2018.

## **BIRTHS COVERED BY MEDICAID**

Principal source of payment for the delivery was Medicaid (percent of live births)

0.0 - 28.3
28.4 - 40.9
41.0 - 52.7
52.8 - 65.4
65.5 - 89.7
📃 No data

Without Medicaid, more than 1.5 million pregnant women across the US would be uninsured each year. Without insurance, access to well-woman care, medication for medical conditions, tobacco cessation and more becomes nearly impossible.

More than 380,000 babies are born prematurely in the U.S. each year — that's one baby every two seconds. Just imagine how many sick babies and their families would face devastating consequences if not for Medicaid.

Medicaid was the source of payment for 42.6% of all 2016 births in the United States.

Counties shaded in gray indicate there were fewer than 20 births covered by Medicaid in 2016 and a reliable rate could not be calculated. Source: National Center for Health Statistics, final natality data, 2016. Prepared by March of Dimes Perinatal Data Center, 2018.
